HUMFX Human factor X mRNA. K01886 K01886.1 GI:182820

DEFINITION ACCESSION VERSION

```
Original source text: Human liver, cDNA to mRNA, clone lambda-X-1137.
In processing, factor X (Stuart factor) is converted to Xa by cleavage of a glycopeptide from the amino-terminal end of the heavy chain. It then acts as a serine protease in converting prothrombin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /codon_start=1

Consortium/LINL at: http://image.llnl.gov Series: IRAL Plate: 53 Row: n Column: 1 This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 6753805. Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /nores"BGF_CA; Region: Calcium-binding EGF-like domain, present in a large number of membrane-bound and extractiular (mostly animal) proteins. Many of these proceeding require calcium for their biological function and calcium-binding sites have been found to be located at the N-terminus of particular EGP-like domains"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Direct Submission
